

Addiction affects families everywhere.

Help your patients take the first step on the road to recovery

**For their family.
For the future.**

New Vision Withdrawal Management helps people through the withdrawal process safely and effectively. New Vision offers an inpatient medical stabilization service for adults with drug, alcohol or related health issues.

Service Overview

The service accepts adults who are currently using or are experiencing acute withdrawal symptoms from certain drugs. It consists of a medically supervised hospital stay for inpatient stabilization that typically lasts 3 days. The inpatient stay includes the following aspects:

- ▶ Pre-Screening
- ▶ Assessment
- ▶ Admission
- ▶ Medical Stabilization
- ▶ Appropriate Discharge Planning

Our Treatment Protocols

New Vision offers scheduled medication tapers, according to evidence-based practice, published by the American Society of Addiction Medicine (ASAM).

Additionally, New Vision offers various medications to accommodate break-through withdrawal symptoms, promoting comfort and preserving dignity.

Why should I refer my clients?

You may have a patient that is not a suitable candidate for outpatient detox—their withdrawal symptoms are more severe; they have comorbid health issues that may lead to complications; they do not have a support person willing to monitor the person’s progress closely, or a living situation supportive of sobriety.

You may have a patient with a poly-substance addiction, and you’d like to get them onto just one treatment option.

You may have a patient who could be better treated with a lower dose of their medication, and you need them to be “at baseline.”

Any of these scenarios are a good reason to refer your client to New Vision.

As the provider, you can expect:

- *Investment from the New Vision Team*
- *Progress Reports*
- *Involvement in the discharge planning process*
- *Notification of Discharge*
- *Confidence in patient care*
